 Full text available: pdf(1.32 MB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Media access control protocols for an optically interconnected star-coupled system with pre-allocated WDM channels are introduced and compared. The photonic network is based on a passive star-coupled WDM-based configuration with high topological connectivity and low complexity. The channels are pre-allocated to the nodes with this approach, where each node has a home channel that it uses either for all data packet transmissions or all data packet receptions. A home c ...
